PROFESSIONAL SUMMARY

Associate DevOps Engineer with 1+ year of experience in CI/CD, build and release automation, and DevSecOps. Migrated 9+ enterprise platforms between Jenkins environments with zero downtime and integrated Black Duck (SCA) and Fortify (SAST) scanning across 6+ platforms. Hands-on with Jenkins, Docker, Kubernetes, Terraform, AWS, Git, Python and Bash on Linux. AWS Certified Cloud Practitioner.

TECHNICAL SKILLS

- **CI/CD & Build Tools:** CI/CD, Jenkins, Jenkinsfile, Declarative Pipelines, Scripted Pipelines, Shared Libraries, Pipeline as Code, Webhooks, JFrog Artifactory, Confluence
- **Cloud & Platforms:** Amazon Web Services (AWS), EC2, S3, IAM, VPC, CloudWatch, Health Checks, Alerting
- **Containers & Orchestration:** Docker, Docker Compose, Containerization, Kubernetes
- **Infrastructure as Code:** Infrastructure as Code (IaC), Terraform, AWS CloudFormation
- **Scripting & Operating Systems:** Python, Bash, Shell Scripting, Groovy, YAML, Linux Administration, REST APIs, Troubleshooting, Root Cause Analysis
- **Version Control & DevSecOps:** Git, GitHub, GitLab, Branching, Pull Requests, Black Duck (SCA), Fortify (SAST), Vulnerability Scanning, Access Control

PROFESSIONAL EXPERIENCE

Associate DevOps Engineer, Sutherland Global Services July 2025 – Present
Hyderabad, Telangana

- Migrated CI/CD for 9+ enterprise platforms from Tracfone Jenkins to Verizon Jenkins with zero downtime, by moving Dev, QA, QA-sync, TST and PROD pipelines (approval and deploy) in phases, supporting both Jenkins instances, and documenting migrated pipeline paths on Confluence.
- Served as single point of contact for the Jenkins pipeline-failure Slack channel, by acknowledging developer requests within seconds, troubleshooting failures (including live calls), and tracking open blockers to closure.
- Managed ADOMS access (role-based access control, RBAC) for platform-specific application (VAST) IDs across 9+ platforms and their microservices, by guiding developers on correct access requests and resolving issues.
- Unblocked urgent and compliance-driven deployments while access approvals were pending, by deploying on developers' behalf over screen share and granting temporary, scoped pipeline access (Jenkins security permissions, employee IDs).
- Restored blocked TST and PROD releases, by manually setting approval and deploy properties on artifacts in JFrog Artifactory so developers could re-trigger failed pipelines.
- Reduced security risk across 6+ platforms, by integrating Black Duck (SCA) and Fortify (SAST) vulnerability scanning into Jenkins build pipelines (DevSecOps).
- Improved rollback control and upgrade handling on 4 platforms, by converting legacy pipelines to Pipeline as Code (SCM) using Jenkinsfile.
- Cut Jenkins branch-selector load time from 60 seconds to near-instant, by adding GitLab API pagination and descending sort.
- Unblocked payment-portal deployments for 2 Dockerized microservices stalled 4–6 weeks, by diagnosing an application.yaml (HikariCP max-lifetime) validation failure, avoiding a shared-pipeline change that would have affected other microservices, and coordinating a pod-level fix with the Kubernetes team while guiding developers.

PROJECTS

Profile App – End-to-End Jenkins CI/CD Pipeline | github.com/12pavani/jenkins-gsl-profileApp

- Containerized a full-stack app (Node.js, React, MongoDB), by writing Dockerfiles and a Docker Compose setup.
- Automated release to Kubernetes, by building a Jenkins pipeline for build, image push, deploy, health check and alerts.

Jenkins Webhook PR Conflict Detector | github.com/12pavani/Webhook-Learn

- Automated merge-conflict detection on pull requests, by triggering Jenkins from GitHub webhooks.
- Identified the exact conflicted files, by calling the GitHub API from the pipeline.

EDUCATION

National Institute of Technology, Srinagar 2021 – 2025
Bachelor's Degree in Information Technology

CERTIFICATIONS

AWS Certified Cloud Practitioner
